

**CONIFER SEEDLING ORDER FORM - APRIL 2024**

**Call Jake Weimer with questions**  
 208-817-9786  
 jake@jdforestmanagement.com  
 www.jdforest.com

**Buyer Contact Information**

Name: \_\_\_\_\_  
 Email: \_\_\_\_\_  
 Phone: \_\_\_\_\_  
 Address: \_\_\_\_\_

**Pickup Location (Check the Box)**

**PRIEST RIVER PICKUP:**   
 Thursday April 18th, 2024  
 9:00 am to 4:00 pm  
 388 Bodie Canyon Road  
 Priest River, ID 83856

**COEUR D'ALENE PICKUP:**   
 Thursday April 18th, 2024  
 4:00 pm - 6:00 pm  
 215 E Wallace Ave  
 Coeur d'Alene, ID 83814

Planting available 2,000 tree minimum, call Jake for pricing. Trees sold by box or bundle.

**8 Cubic Inch Plugs - 15 Seedlings per Bundle - 255 Seedlings per Box**

Sold As	1-16 Bundles	1-3 Boxes	4-6 Boxes	7-9 Boxes	10+ Boxes
Tree Count	15 - 240	255 - 765	1,020 - 1,530	1,785 - 2,295	2,550+
Price per Seedling	\$1.40	\$1.10	\$0.90	\$0.80	\$0.70
Western Larch ( <i>top seller</i> )					
White Pine					
Ponderosa Pine					
Douglas-fir					

Subtotal Due:

**15 Cubic Inch Plugs - 8 Seedlings per Bundle - 128 Seedlings per Box**

Sold As	1-15 Bundles	1-8 Boxes	9+ Boxes
Tree Count	8 - 120	128 - 1,024	1,152+
Price per Seedling	\$1.65	\$1.35	\$1.20
Western Redcedar			

Subtotal Due:

*JDFM is partnering with IFOA to provide quality seedlings to family forest landowners. idahoforestowners.org*

**Signature below confirms the following terms:**

- 1.) Full payment due at time of order
- 2.) No refunds on trees not picked up

**Signature:** \_\_\_\_\_

Due:	<input type="text"/>
6% Sales Tax:	<input type="text"/>
Total Due:	<input style="background-color: yellow;" type="text"/>

**Please return signed form with payment to:**  
 JD Forest Management  
 P.O. Box 55  
 Priest River, ID 83856

## Western Larch Species Overview

*Western larch (or tamarack) is the most widely and successfully planted conifer in north Idaho. It is the "bread and butter" of reforestation in the region.*

### Tree Planting Properties of Western Larch

#### 1. Excellent Survival

- Western larch generally has the best planting survival of any species in the area.
- Larch is ecologically adapted to be the first species that comes back after a wildfire. A disturbed logging site provides similar conditions of bare soil and plenty of sunlight – just what larch needs to thrive!

#### 2. Fast Early Growth

- Larch thrives in full sunlight and has by far the fastest early growth of any native conifer.
- Seedlings are commonly **6+ feet tall** within 2-5 years.

#### 3. Browse Resistance

- Deer and elk browse is a major tree planting challenge.
- Western larch loses its needles in the fall so is less palatable to deer in March and April when they are hungry. Douglas-fir and ponderosa pine are both much more susceptible to browse than larch.

#### 4. Disease Resistance & Broad Soil Suitability

- Western larch is resistant to root rot diseases that cause significant problems with Douglas-fir and grand fir. Reforesting root-diseased stands with western larch is often a good plan.
- Larch is suitable for all local soil types except for dry and rocky ponderosa pine sites.

#### 5. Strong Wood Quality

- Larch is sold together with Douglas-fir as the Fir-Larch species mix which has the highest wood strength ratings and generally the second highest log prices after cedar.

#### 6. Aesthetic Value

- Larch turns a bright gold in the fall enhancing aesthetics for your timberland or even around your home or cabin.
